

Product Requirement Document (PRD)

CampusFind Pro - Product Specifications and Scope Layout

1. Executive Summary & Goals

CampusFind Pro is a specialized, secure university lost-and-found portal. Belongings lost on college campuses (keys, textbooks, calculators, laptops, and student IDs) disrupt learning routines and create operational overhead for security desks. This platform centralizes and automates reporting and recovery workflows using cloud databases and secure notifications.

2. User Personas & User Stories

- **Student Persona (Dev Darji):** Accesses the portal via student credentials, logs items they lost or found, checks claim status, and manages rewards.
- **Admin Persona (Security Officer):** Verifies claims of ownership by matching descriptions or verifying security questions, and returns items to original owners.
- **IT Administrator Persona:** Manages system telemetry, inspects activity logs, configures environment keys, and modifies core system parameters.

3. Scope & Functional Requirements

- **Google OAuth Authentication:** Allows users to securely log in and automatically provisions active student records.
- **Report Submission:** Users fill out titles, descriptions, select categories, input location markers, lost/found dates, and optional reward and picture attachments.
- **Claim Process Management:** Users can submit claims for found items by answering questions or uploading verification records.
- **Email Notifications:** Bypasses platform SMTP blocks using Brevo HTTP APIs to dispatch recovery notifications and password reset links.
