

Feature Ticket List

CampusFind Pro - Release 1.0 Epic Tickets and Checklist

1. Development Ticket Backlog - Epic 1

The development roadmap and ticket checklist for Release 1.0 (MongoDB Migration and Integrations) are organized below:

- **[CF-101] MongoDB Database Migration:** Transition database layers from MySQL to MongoDB Atlas. Rewrite config/database.php to include find, findOne, insert, update, delete, count, and aggregate helpers (Completed - Priority: Blocker).
- **[CF-102] Dynamic Site Protocol Detection:** Auto-resolve HTTPS/HTTP environments on Render configurations using HTTP_X_FORWARDED_PROTO mappings (Completed - Priority: High).
- **[CF-103] Remote Google Avatar Synchronization:** Auto-update broken local profile pictures with remote Google profile links on Callback (Completed - Priority: Medium).
- **[CF-104] Recursive BSON Query Parser:** Implement castFilterIds to automatically map string IDs to ObjectIds in the database class (Completed - Priority: High).
- **[CF-105] Brevo.com API Integration:** Build an HTTP REST cURL client for sending reset links and codes (Completed - Priority: High).
- **[CF-106] Production Base URL Override:** Force reset links in emails to use live domains instead of localhost (Completed - Priority: Medium).
