

Technical Requirement Document (TRD)

CampusFind Pro - Technical Specifications

1. System Architecture

The system is built on a lightweight MVC stack utilizing native PHP 8+, MongoDB Driver extensions, and Bootstrap 5. Core operations are mapped using NoSQL document modeling to store users, reports, claims, and activity logs.

2. MongoDB Atlas Schema Definitions

- **users:** Stores email, name, avatar, and active sessions.
- **lost_items / found_items:** Contains title, location, category_id, user_id, and reward details.
- **claims:** Records claimer_id, item_id, item_type, status, and admin_remarks.
