

Security and Access Document (SAD)

CampusFind Pro - System Security Specifications

1. Cryptographic Security Standards

User security is maintained through strict BCrypt password hashing and custom anti-CSRF token verification routines on all database state modifications.

2. Access Control Policies

- **Role verification:** Implements `requireRole('student')` or `requireRole('admin')` routing filters on restricted endpoints.
- **JSON Injection Sanitization:** Automated MongoDB query filter casting checks ensure strings are safely parsed to `ObjectIds` preventing injection vectors.
